

MODEL SG-40

Track Stump Grinder

The Bandit SG-40 is engineered to be the perfect machine for a variety of **stump grinding professionals** who need to quickly move from site to site with efficiency. Featuring an aggressive cutterwheel drive system, adjustable tracks, and a refined center of gravity, the cutting-edge innovations of the SG-40 promise more **performance and productivity** when maneuvering in a challenging environment and grinding with confidence at the stump. And **intuitive controls** make operation easy, no matter if you're a seasoned professional or a rental customer.

SG-40

COME OUT SWINGING

The Bandit SG-40 is a highly productive grinder that can aggressively track down and sweep away stumps with authority. A durable spindle and hub assembly promotes a long-lasting lifetime of oscillating motion and a new swing geometry extends the cutterwheel grinding width to a massive 47". With that type of coverage area, you're sure to spend more time grinding at the stump rather than repositioning.

STAYING ON TRACK

The SG-40 rides on durable rubber tracks that can take this machine across delicate lawns, rough terrain, or even rut-filled lot clearing sites. The tracks are vital for stabilizing the grinder at the stump, and are also now easily adjustable to keep proper tension. When the job is done, the tracks help the machine climb quickly into the trailer so you can get on to the next job.

INTUITIVE CONTROLS

Controls are mounted at the rear of the machine on a pivoting console, so no matter the position of the stump, you'll be able to get an excellent view of the grinding action. Control levers and instrumentation, including service points, have been designed with consideration for good, proper ergonomics that make the SG-40 a pleasure to run.

THE FORCE OF GRAVITY

The location of the tracks and tanks on the chassis of the SG-40 creates a better center of gravity and wider distribution of weight. This helps to provide more power, force, and leverage, especially on inclined surfaces or uneven chip piles. The amount of shock to components is also reduced with a smoother and more balanced ride over rough terrain.

POWERFUL EFI ENGINE

A 38 horsepower gasoline engine, featuring electronic fuel injection, is easy to start, operate, and control no matter your comfort level with small engines. It is an abundantly powered and proven unit for rental companies or professional grinders who want to focus on the job and not an engine.
