IMPORTANT: PLEASE READ

Safety Checklist

- Confirm chemical compatibility of product being stored with that of the polyethylene tank and fittings.
- Vent tanks as required to prevent pressure or vacuum from developing.
- Prevent excessive heat near or inside the tank. Polyethylene tanks are designed for a maximum continuous temperature of 70 °F.*
- Have and use Material Safety Data Sheets (MSDS) for the product being stored.
- Regard tanks as confined spaces. Follow proper entry procedures.
- Do not stand on tank domes as the surface is flexible and slippery.
- Do not move tanks while holding liquid and never allow personnel under a tank when it is being lifted.

Instillation Checklist

- Locate the tank wisely. Protect personnel from chemical danger in the event of a leak and protect the tank from traffic damage and excessive heat. Tanks are designed for above ground use only.
- Utilize adequate secondary containment according to particular chemical danger and governmental and industry requirements.
- Fully support the entire bottom of the tank on a clean, smooth concrete foundation. Failure to provide proper foundation and support constitutes a misuse of the tank and will void your warranty.
- Fill the usable capacity of the tank with water and hydro test for a minimum of 5 hours after instillation and before product is introduced to ensure tank and fitting integrity.
- Install labels for chemical warning that complies with all local, federal and OSHA requirements.

***EXTREME CAUTION:** Consult Customer Service on any applications where continuous use is above 70 °F.

IMPORTANT: PLEASE READ

Operating Parameters

- Temperature – Tank specific gravity ratings based on product temperature of 70 °F.
- Pressure – Atmosphere pressure must be maintained in tank at all times; vacuum must = 0.
- Make sure tank is properly vented for the type of material and flow rates expected at all times.
- Plumbing – Flexible connections REQUIRED to preserve warranty.

Maintenance Guidelines

- Tanks should be inspected on a routine basis.
- Clean the exterior and interior of the tank. You can not properly inspect a dirty tank.
- Inspect the exterior and the interior of the tank for cracking and brittle appearance.
- Pay Particular attention to areas around fittings and where different planes of the tank radius into one another.
- A bright light source should be used to inspect the interior from the man-way opening to avoid a confined space entry.
- Inspect fittings and exterior gaskets for leaks and signs of general corrosion and deterioration.
- Polyethylene tanks may have some minor cosmetic imperfections due to the size and combination of mold sections that are used. These imperfections have no effect on long-term performance or warranties.

Go to: Chemtainer.com for Warranty information.

Disclaimer: Gallonage/ size disclaimer volume and unit measurements are subject to variances due to thermal expansion, contraction and general molding tolerances.

FOB Shipping from: W. Babylon NY, Delano MN, Fairfield TX, Merced CA, Keaau HI, Hummelstown PA, Pompano Beach FL
