

# DITCH WITCH® PR100 PIPE BURSTING SYSTEM

## KEY FEATURES

The PR100 pipe burster is built stout and built to pull—with features only Ditch Witch could offer, like heavy-duty, commercial-grade steel and specially engineered pulling cylinders fabricated in our own factory.

Its fully-enclosed—yet fully accessible—power pack is the quietest in its class at 83 dBA and includes features you can put to work, like remote drains and an auxiliary pump for running hydraulic power tools on the job.

With a rod box that mounts on the bursting unit, the PR100's compact size leaves a small footprint, which means less disruption and less potential interference with adjacent structures.

Optional rod make-up device speeds make-up times, makes operation easy, and allows flexible setup on a variety of jobsites.

Downhole tools have a simple, proven, solid design; fewer moving parts than the competition means less maintenance and fewer potential repairs in the field.

A rugged steel job box—packed with everything from wrenches to grease—is standard equipment.

Load-sensing hydraulics allow the bursting unit to automatically downshift when a load is introduced, and allow higher speeds during makeup and breakout for increased production.

The Ditch Witch PR100 pipe bursting system is backed by superior quality service and support, available only from your local Ditch Witch dealer.

Three empty rectangular boxes, each intended for a drawing. They are arranged horizontally and are of equal size.[illegible]
