GENERAL INFORMATION

GENERAL INFORMATION 1-1

REPAIR PARTS

CHASSISS/TURNTABLE MOUNTING 4X2 – BEFORE FEBRUARY 2001 2-1
DRIVE INSTALLATION 4X2 2-2
STEERING 4X2 2-3
STEERING INSTALLATION 4X2 2-4
STEERING YOKE AND WHEEL 4X2 2-5
CHASSIS/TURNTABLE MOUNTING 4X2 2-6
CHASSIS COVER INSTALLATION 4X4 2-7
CHASSISS/TURNTABLE MOUNTING 4X4 2-8
COUNTERWEIGHT SUBASSEMBLY 4X4 2-9
DRIVE 4X4 – BEFORE APRIL 2006 2-10
DRIVE 4X4 – AFTER MARCH 2006 2-11
DRIVE 4X4, AFTER JULY 2006 2-12
DRIVE 4X4, AFTER MAY 2008 2-13
STEERING YOKE AND WHEEL 4X4 2-14
FRONT WHEEL DRIVE 4X4 2-15
TURNTABLE ELECTRICAL – KU 2-16
LIFT/SWING/COUNTERWEIGHT 2-17
FUEL TANK – BEFORE JUNE 2007 2-18
FUEL TANK - AFTER MAY 2007 2-19
HYDRAULIC OIL RESERVIOR MOUNTING 2-20
BOOMS – BASE END 2-21
BOOM AND HOSE CARRIER – S/N TB66J-04-000099 AND BEFORE 2-22
BOOM/HOSE CARRIER/JIB ASSEMBLY ANSI – S/N TB66J-04-000100 AND AFTER 2-23
BOOM/HOSE CARRIER/JIB ASSEMBLY ANSI – AFTER APRIL 2015 2-24
BOOM/HOSE CARRIER/JIB ASSEMBLY CE – AFTER MARCH 2015 2-25
HOSE CARRIER ASSEMBLY – AFTER APRIL 2015 2-26
HOSE CARRIER ASSEMBLY--S/N TB66J-04-000099 AND BEFORE 2-27
HOSE CARRIER ASSEMBLY – SN TB66J-04-000100 AND AFTER 2-28
BOOMS – BEFORE MARCH 2001 2-29
BOOMS – AFTER JULY 2006 2-30
BOOMS ASSEMBLY – S/N TB66J-04-000100 AND AFTER 2-31
BOOMS ASSEMBLY – AFTER APRIL 2015 2-32
BOOMS – AFTER APRIL 2009 2-33
EXTENSION CYLINDER ASSEMBLY 2-34
JIB BOOM ASSEMBLY 2-35
6 FT JIB ASSEMBLY ANSI – S/N TB66J-04-000100 AND AFTER 2-36
6 FT JIB ASSEMBLY CE – AFTER MARCH 2015 2-37
ENGINE MOUNTING CUMMINS – BEFORE AUGUST 2008 2-38
ENGINE TRAY CUMMINS 3.3 TIER 3 – AFTER MARCH 2007 2-39
ENGINE TRAY CUMMINS 3.3 – BEFORE MARCH 2008 2-40

Courtesy of Crane.Market

ENGINE TRAY CUMMINS 3.3 TIER 3 – AFTER JANUARY 2013 2-41
ENGINE/RADIATOR ASSEMBLY – CUMMINS 3.3 TIER 3 2-42
ENGINE MOUNTING – DEUTZ F4L-1011F 2-43
ENGINE DEUTZ F4L-1011F – BEFORE OCTOBER 2006 2-44
ENGINE DEUTZ F4L-1011F – AFTER SEPTEMBER 2006 2-45
ENGINE DEUTZ F4L-1011F – AFTER FEBRUARY 2009 2-46
ENGINE MOUNTING FORD LRG 425 WITH ECM 2-47
ENGINE MOUNTING FORD LRG 425 WITH EPM 2-48
ENGINE FORD LRG 425 2-49
EXHAUST/AIR CLEANER INSTALLATION FORD – BEFORE APRIL 2005 2-50
EXHAUST/AIR CLEANER INSTALLATION FORD – AFTER MARCH 2005 2-51
ENGINE INSTALLATION – GM TIER 3 2-52
ENGINE SUBASSEMBLY – GM TIER 3 2-53
RADIATOR ASSEMBLY GM 2-54
AIR CLEANER INSTALLATION GM 2-55
ENGINE SUBASSEMBLY – KU V2403 2-56
AIR CLEANER – DEUTZ 2-57
EXHAUST AND AIR CLEANER – DEUTZ 2-58
AIR CLEANER – CU/FORD/GM 2-59
PLASTIC COWLING DEUTZ – BEFORE MARCH 2006 2-60
PLASTIC COWLING DEUTZ – AFTER OCTOBER 2006 2-61
PLASTIC COWLING DEUTZ – AFTER SEPTEMBER 2014 2-62
STEEL COWLING FORD/CU – AFTER S/N TB66J-04-000149 2-63
STEEL COWLING FORD/CU – AFTER MAY 2011 2-64
STEEL COWLING FORD/CU/GM/KU – AFTER APRIL 2015 2-65
PLATFORM INSTALLATION – PARKER ROTATOR 2-66
PLATFORM INSTALLATION – HELAC ROTATOR 2-67
PLATFORM INSTALLATION STEEL GRAVITY GATE – PARKER ROTATOR 2-68
PLATFORM INSTALLATION ALUMINUM GRAVITY GATE – PARKER ROTATOR 2-69
PLATFORM INSTALLATION ALUMINUM GRAVITY GATE CE – PARKER ROTATOR 2-70
PLATFORM ASSEMBLY ALUMINUM SWING GATE – PARKER ROTATOR 2-71
PLATFORM ASSEMBLY STEEL TRI-ENTRY, HELAC ROTATOR (1 OF 2) 2-72
PLATFORM ASSEMBLY STEEL TRI-ENTRY – HELAC ROTATOR (2 OF 2) 2-73
PLATFORM ROTATOR HELAC – BEFORE JUNE 22, 2013 2-74
PLATFORM ROTATOR PARKER – AFTER JUNE 21, 2013 2-75
LEGACY SNORKEL GUARD WIRING 2-76
SNORKEL GUARD ASSEMBLY 2-77

HYDRAULICS

HYDRAULIC OIL RESERVOIR – AFTER JULY 2006 3-1
DRIVE MOTOR 3-2
DRIVE MOTOR WITH INTEGRAL BRAKE 3-3
GEAR HUB HIGH TORQUE – AUBURN GEAR 3-4
DRIVE VALVE SUB-ASSEMBLY 3-5
DRIVE SEQUENCE VALVE – LEFT HAND 3-6

Courtesy of Crane.Market

DRIVE SEQUENCE VALVE – RIGHT HAND 3-7
SWING DRIVE ASSEMBLY 3-8
DRIVE/LIFT/SWING VALVE 3-9
DRIVE/LIFT/SWING CONTROL VALVE 3-10
MOTION CONTROL VALVE – DRIVE 3-11
MOTION CONTROL VALVE ROSS/CHAR-LYNN – TURNTABLE SWING 3-12
MOTION CONTROL VALVE FLUIDTECH – TURNTABLE SWING 3-13
PACKAGE VALVE NON-PROPORTIONAL 3-14
CONTROL VALVE ASSEMBLY NON-PROPORTIONAL – VICKERS 3-15
CONTROL VALVE ASSEMBLY NON-PROPORTIONAL – FLUIDTECH 3-16
NON-PROPORTIONAL CONTROL VALVE FLUIDTECH – AFTER JANUARY 2008 3-17
ACCUMULATOR 3-18
ANTI-CAVITATION VALVE – BEFORE AUGUST 2005 3-19
ANTI-CAVITATION VALVE – AFTER JULY 2005 3-20
ANTI-CAVITATION VALVE 3-21
SERIES/PARALLEL PACKAGE 4X4 – RIGHT HAND 3-22
SERIES/PARALLEL PACKAGE 4X4 – LEFT HAND 3-23
AC GENERATOR VALVE 3-24
CHECK VALVE 3-25
DUAL CROSSOVER RELIEF VALVE – SUN 3-26
DUMP VALVE 3-27
FLOW DIVIDER VALVE 3-28
FLOW DIVIDER VALVE SUB-ASSEMBLY 3-29
HYDRAULIC WARM-UP VALVE 3-30
SELECTOR VALVE 4X2 3-31
SELECTOR VALVE 4X4 3-32
SELECTOR VALVE – LEFT HAND 3-33
SELECTOR VALVE – RIGHT HAND 3-34
JIB/PLATFORM SELECTOR VALVE ASSEMBLY 3-35
PLATFORM/JIB SELECTOR VALVE 3-36
CENTERPOST AND FITTINGS – BEFORE MAY 1986 3-37
CENTERPOST AND FITTINGS – AFTER MAY 1986 3-38
LEVEL/STEERING CYLINDER – ROSENBOOM 3-39
LIFT CYLINDER ASSEMBLY 3-40
LIFT CYLINDER – GBI 3-41
LIFT CYLINDER – ROSENBOOM 3-42
EXTENSION CYLINDER – GBI 3-43
EXTENSION CYLINDER – ROSENBOOM 3-44
EXTENSION CYLINDER – SEABEE 3-45
JIB BOOM LIFT CYLINDER ASSEMBLY 3-46

DANGER

The aerial platform is not electrically insulated. Death or serious injury will result from contact with, or inadequate clearance from, an energized conductor.

Do not go closer than the Minimum Safe Approach Distance as defined by ANSI standards.

Regard all conductors as energized.

Allow for electrical wire sag and aerial platform sway.

If the platform, boom structure, or any part of the aerial platform contacts a high-voltage electrical conductor, the entire machine can become electrically charged.

If that happens, remain on the machine and do not contact any other structure or object. This includes the ground, adjacent buildings, poles, and any other objects that are not part of the aerial platform.

Such contact could make your body a conductor to the other object, creating an electrical shock hazard resulting in death or serious injury.

If an aerial platform is in contact with an energized conductor the platform operator must warn ground personnel in the vicinity to stay away. Their bodies can conduct electricity creating an electrical shock hazard resulting in death or serious injury.

Do not approach or leave the aerial platform until the electricity has been turned off.

Do not attempt to operate the lower controls when the platform, boom structure, or any part of the aerial platform is in contact with a high-voltage electrical conductor or if there is an immediate danger of such contact.

Personnel on or near an aerial platform must be continuously aware of electrical hazards, recognizing that death or serious injury can result from contact with an energized conductor.

California

Proposition 65 Warning

Battery posts, terminals and related accessories contain lead and lead components, chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. Wash hands after handling.

California

Proposition 65 Warning

Diesel and gasoline engine exhaust and some of its constituents are known by the State of California to cause cancer, birth defects or other reproductive harm.

General Information

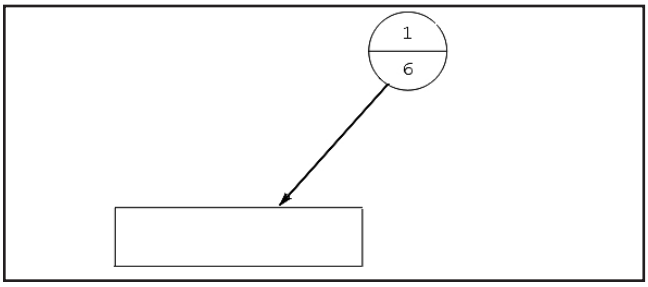

About This Manual

This manual covers TB66J and TB66JRT aerial platform. Information is included for machines that have been manufactured to conform to all applicable requirements of the following organizations:

- American National Standards Institute (ANSI)
- Canadian Standards Association (CSA)
- European Committee for Standardization (CE)
- Australian Standards (AS) certification

Part pages include a drawing and a bill of material. The bill of material lists the item number that is on the drawing, the Snorkel part number, quantity used and a description of the item.

Some callouts in the drawings may have a balloon with two numbers. The top number is the item number and the bottom number is the quantity of the item at that location.

While Snorkel has attempted in every way to confirm that all information in this manual is correct, improvements are being constantly made to the machine that may not be reflected in this manual.

If you find information in this manual that is not correct or is confusing, you are urged to report your findings to Snorkel for our evaluation. Your input is important to us and will be used in future printings of this manual.

This machine is covered by a limited warranty that specifically identifies items warrantied by Snorkel and those items covered by original manufacturer's warranty. A copy of the Snorkel Limited Warranty is located on the inside of the back cover of this manual.

Repairs and Maintenance

Every person who maintains, inspects, tests or repairs the machine must be qualified and authorized to do so.

⚠Caution

Do not modify this aerial platform without prior written consent of Snorkel Engineering Department. Modification may void the warranty, adversely affect stability or affect the operational characteristics of the aerial platform.

Abbreviations

The following abbreviations may be used in this manual.

AC	alternating current
ANSI	American National Standards Institute
AR	as required
CCA	cold cranking amps
cm	centimeter
DC	direct current
ft	feet
GFCI	ground fault circuit interruptor
in	inch
lbs	pounds
mm	millimeter
no	number
NPT	national pipe thread
psi	pounds per square inch
qty	quantity
rpm	revolutions per minute
UL	Underwriters Laboratories Inc.

Additional Information

All correspondence relative to this machine, such as field reports, discrepancy reports, requests for information, etc., should be directed to:

Service and Parts Information

Ordering Parts

When placing an order for service or repair parts, please have the following machine information readily available.

- Model number
- Serial number
- Snorkel part number
- Description of part
- Quantity of parts required
- Your purchase order number
- Address for order to ship to
- The desired shipment method

The parts order form on the following page may be mailed or faxed to the attention of the Parts Department at the following location:

Snorkel North America
P.O. Box 1160
St. Joseph, MO 64502-1160 USA
Phone: 1-800-255-0317
Parts Fax: 1-785-989-3077

Snorkel Europe
Vigo Centre
Birtley Road
Washington
Tyne & Wear
NE38 9DA
Phone: +44 (0) 845 1550 058
Parts Fax: +44 (0) 1952 607 678

Attention: Parts Department

For your convenience, our electronic on-line ordering system is available at the following Internet location:

http://www.snorkellifts.com

ANSI and OSHA Compliance

All owners and users of the aerial platform must read, understand and comply with all applicable regulations. Ultimate compliance to OSHA regulations is the responsibility of the user and their employer.

ANSI publications clearly identify the responsibilities of all personnel who may be involved with the aerial platform. A reprint of the “Manual of Responsibilities for Dealers, Owners, Users, Operators, Lessors and Lessees of ANSI/SIA A92.5-2006 Boom-Supported Elevating Work Platforms” is available from Snorkel dealers or from the factory upon request.

Copies are also available from:

Scaffold Industry Association, Inc.
P.O. Box 20574
Phoenix, AZ 85036-0574 USA

Manuals

Manuals are available from Snorkel to support any of the machines that we produce.

The specific manuals for TB66J aerial platforms are as follows:

TB66J Operator’s Manual – ANSI
Snorkel part number – 0083740

TB66J Operator’s Manual – CE
Snorkel part number – 0084221

TB66J/TB66JRT Repair Parts Manual
Snorkel part number – 0083734

ANSI Manual of Respobsibilities
ANSI/SIA A92.5-2006
Snorkel part number – 0084053

NOTES:

1. ASSEMBLE STEEL FRAME, ITEM 54, INSIDE PLASTIC FRONT COWLING BEFORE PLACING ON MACHINE.
2. PLACE COWLING WITH FRAME ON MACHINE AND ALIGN MOUNT HOLES.
3. ATTACH COWLING AND FRAME WITH INDICATED MOUNTING HARDWARE. NOTE THAT THE FRONT MOUNT HOLE, NEAR THE POCKET OF THE PLASTIC COWLING, WILL BE USED TO MOUNT THE BOX MOUNT BRKT.
4. ASSEMBLE GROUND CONTROL BOX USING WELD STUD LOCATED ON THE STEEL FRAME INSIDE THE PLASTIC COWLING AND FRONT MOUNTING HOLE ON THE COUNTERWEIGHT.
5. LOCATE HOLES ON EACH SIDE OF THE STEEL FRAME AND DRILL Ø .28 HOLES IN THE PLASTIC COWLING USING THE HOLES IN THE STEEL FRAME AS GUIDES.
6. ASSEMBLE HARDWARE AS SHOWN THROUGH THE DRILLED HOLES AS SHOWN, BEING SURE NOT TO OVER TIGHTEN. (TIGHTEN UNTIL SNUG)

Maintenance

Every person who maintains, inspects, tests or repairs the aerial platform must be qualified to do so. Maintenance functions must be performed by maintenance personnel who are qualified to work on the aerial platform.

⚠Caution

Welding current can be very intense. Damage to electronic components can result. Connect the ground clamp as close as possible to the area being welded. Disconnect the battery cables and any microprocessors and engine control modules before welding on the machine.

If it becomes necessary to weld aerial platform components as a method of repair, take all precautions to prevent damage to electronic circuitry and devices on the machine. This includes, but may not be limited to, disconnecting battery cables and electronic devices.

Do not modify this aerial platform without prior written consent of the Snorkel Engineering Department. Modification may void the warranty, adversely affect stability or affect the operational characteristics of the aerial platform.

Maintenance Schedules

The manufacturer has established a preventative maintenance schedule to detect any defective, damaged or improperly secured parts and provide information regarding lubrication and other minor maintenance items.

This schedule includes the following:

- Daily Prestart Inspection
- Frequent Inspection and Maintenance – Every 90 Days or 150 Hours
- Annual Maintenance – Every 500 Hours

The Daily Prestart Inspection must be performed by a trained operator. All other maintenance and inspection must be performed by a trained service technician only. Retain a copy of these forms for your records.

All placards and decals on the machine must be in place and legible. Use the Placards and Decals parts page in the Repair Parts section of this manual to check these placards and decals.

Snorkel recommends that you make additional copies of the preventative inspection and maintenance checklists for your use in performing these inspections.

⚠Warning

The potential for accident increases when operating an aerial platform that is damaged or malfunctioning. Death or serious injury can result from such accidents. Do not operate the aerial platform if it is damaged or malfunctioning.

Repair all defects before returning the machine to service.

General Information

The parts drawings located in the Repair Parts section are designed for use as a guide for proper disassembly of the machine and components, as well as, for parts replacement.

⚠Danger

Hydraulic fluid escaping under pressure can have enough force to inject fluid into the flesh. Serious infection or reaction will result if medical treatment is not given immediately. In case of injury by escaping hydraulic fluid, seek medical attention at once.

Always refer to the hydraulic system installation drawings and the electrical wiring diagram before removing or disassembling associated parts.

When disassembling or reassembling components, complete the procedural step in sequence. Do not partially disassemble or assemble one part, then start on another. Always check your work to assure that nothing has been overlooked.

Keep the following in mind when disassembling or assembling the machine.

- Always be conscious of weight.
- Never attempt to lift heavy objects without the aid of a mechanical device.
- Do not allow heavy object to rest in an unstable condition.
- Always make sure the work platform is in the stowed position, blocked or the weight removed by a suitable lifting device before removing any components from the machine.
- When raising a portion of the machine, be sure that adequate blocking is properly positioned. Do not depend solely on the lifting device to hold and secure weight.
- If a part resists removal, check to see if all fasteners, electrical wiring, hydraulic lines, etc., have been removed or that other parts are not interfering.

Parts should be thoroughly inspected before restoring to service at the time of reassembly. Burrs, nicks or scratches may be removed from machines surfaces by honing or polishing with a #600 crocus cloth,

Courtesy of Crane.Market

followed by a thorough cleaning with an approved cleaning solvent, and blown dry with compressed air. Do not alter the contour of any part. If this operation does not restore the part to a serviceable condition, replace the part.

Replace all o-rings, seals and gaskets at reassembly. Use new roll pins or cotter pins. Dip all packing rings and seals in hydraulic oil before reassembling in cylinder and manifolds. Replace any part having imperfect threads. In general, machines that have been disassembled can be reassembled by reversing the order of disassembly.

The service life of a machine can be increased by keeping dirt and foreign materials out of the vital components. Shields, covers, seals and filters help to keep air and oil supplies clean. However, these items must be maintained on a scheduled basis in order to function properly.

Clean surrounding areas, as well as the opening and fittings before disconnecting air or oil lines. As soon as a line or component is disconnected, cap or cover all openings to prevent the entry of dirt or foreign materials.

New parts should remain in their container until they are ready to be used.

Clearly mark or tag hydraulic lines and electrical wiring connections when disconnecting or removing them from the machine. This will assure that they are correctly reinstalled.

Proper assembly is critical to the successful rebuilding of any machine. Carefully, inspect any parts which are to be reused. If in doubt, replace.

“Safety First” is a good slogan.

Replace any guards and protective devices that have been removed to carry out maintenance and repair work.

Daily Prestart Inspection

Item	Inspect For	Ok
Operator's Manual	In manual holder	
Engine		
Oil level	Between full and add marks	
Coolant	Liquid cooled engines-proper fluid level	
Radiator	Cap tight, good condition and clean	
Air cooled engines	Air intake and fan free of obstructions Belt in good condition	
Fuel tank and line	Tank full, cap in place and tight/no leaks	
Air filter	Indicator in proper position	
Charging system	Proper operation	
Cold weather start kit	No damage or deformation	
Electrical System		
Emergency power battery	Condition and charged for proper operation	
Battery fluid level and terminals	Proper level/clean, connectors tight	
Cables and wiring harness	No wear or physical damage	
Hydraulic System		
Fluid level	Between full and add marks	
Fluid filter	Verify operation in the green zone	
Hoses, tubes, and fittings	No leaks	
Cold weather warm-up kit	Proper operation	
Tires		
Air filled	Good condition, proper inflation	
Foam filled	Good condition	
Wheels	All wheel lug nuts present and tight	
Lower Control Station		
Operating controls	Proper operation	
Emergency stop	Shuts off lower controls	
Emergency power	Proper operation	
Emergency Lowering	Proper operation	
Level Sensor	Sounds tilt alarm	
Flashing Light	Proper operation	
Sandblast Protection Kit	In place and proper operation	
Structures		
Weldments – Chassis, turntable, booms, platform, etc.	Welds intact, no damage or deformation	
Slide pads	In place, no damage or deformation	
Fasteners	In place and tight	
Whiffles and wire ropes	No deformation or broken strands/even tension	
Upper Control Station		
Guardrail system and lanyard anchors	Welds intact, no damage or deformation	
	All fasteners in place, no loose or missing parts	
Operating controls	Proper operation	
Emergency stop and power system	Shuts off upper controls/proper operation	
Horn	Sounds when activated	
Electrical power outlet	Proper operation of outlet and GFCI	
Drive motion alarm	Sounds when aerial platform moves	
Driving and work lights	Proper operation	
Platform control cover	In place and proper operation	
Air line	Good condition, proper operation	
Tow Kit	In place, no damage or deformation	
Placards and Decals	In place and readable

Frequent Inspection and Maintenance – Every 90 Days or 150 Hours

Item	Procedure	Information	Ok
Chassis			
Structural	Check for damage and cracked welds		
Steering cylinder pin caps and tie wire	Verify that all fasteners are in place and are tight		
Steering linkage	Check for proper operation		
Tires	Check for wear and damage		
	Proper inflation	65 psi to 70 psi – Air filled tires only	
Hydraulic tubes and hoses	Check for leaks, wear, and damage		
Drive motor brake	Check for proper operation		
Torque drive and steer wheel lug nuts per placard on wheel	Torque lug bolts/nuts to proper value on machine placard	Front 4x4: 200 to 225 ft lb Front 4x2: 400 to 450 ft lb Rear: 200 to 225 ft lb	
Right drive motor	Check for leaks		
Left drive motor	Check for leaks		
Tie-down and lifting lugs	Check for damage and cracked welds		
Decals and placards	Check for damage and readability Order replacements as necessary		
Turntable			
Structural	Check for damage and cracked welds		
Torque turntable top bolts	Torque to proper value	180 to 200 ft lbs	
Torque turntable bottom bolts	Torque to proper value	180 to 200 ft lbs	
Hydraulic tubes and hoses	Check for leaks, wear, and damage		
Centerpost	Check for leaks, wear, and damage		
Centerpost mounting bolts	Verify that all fasteners are in place and are tight		
Lift cylinder pin caps and tie wire	Verify that all fasteners are in place and are tight		
Lift cylinder and holding valve	Check for leaks, wear, damage, and for proper operation		
Master level cylinder pin caps and tie wire	Verify that all fasteners are in place and are tight		
Master level cylinder and holding valves	Check for leaks, wear, damage, and for proper operation		
Emergency bleed down valve	Check for proper operation		
Cowling	Check for wear/damage and that fasteners are in place and are tight		
Wire harness	Check for wear/damage and that fasteners are in place and are tight		
Rotation brake	Check for proper operation		
Rotation backlash	Check for wear and damage		
Operator's Manual	Proper manual in document holder		
System pressure	Check maximum system pressure	2,500 psi	
Decals and placards	Check for damage and readability Order replacements as necessary

Lubrication Points

Lubrication
Specific lubricants as recommended by Snorkel, should be used in maintaining the unit. If in doubt regarding the use of lubricants other than those listed, contact Snorkel Customer Service Department for evaluation and recommendation.

Refer to the above lubrication illustration to locate component item numbers.

Service all fittings as indicated on the Frequent Maintenance schedule and lubrication illustration. Wipe away all excess lubricant from exposed surfaces. Over lubrication can collect dirt and foreign matter which acts as an abrasive. Lubrication of accessory equipment should be in accordance with the manufacturer's recommendations.

Rotation Bearing
Rotation bearing – Item 1. Pressure gun lubricate bearing at recommended interval using lubricant as outlined in the maintenance schedule. Rotate while lubricating. The lubrication fitting is located on the rear of the turntable.

Rotation Gear Teeth and Pinion
Rotation gear teeth and pinion – Item 2. Gear teeth and gear box pinion should be lubricated with a spray-on type open gear lubricant.

Tie Rods
Tie rods – Item 3. Lubricate at recommended interval using lubricant as outlined in the maintenance schedule.

Swing Drive
Swing drive – Item 4. To check oil level, remove check plug located on the side of the gear box. Unit is full if oil is level with bottom of fill hole or just starts to run out.

Gear Hubs
Gear hubs – Item 5. To check and fill Gear hubs:

1. Rotate wheel until bottom of filler/drain plug is about 1 inch above horizontal centerline.

2. Remove plug with drive ratchet and extension.

3. Fill until lubricant is level with bottom of fill hole.

Note
Do not overfill gear hubs as they are not vented and need air space for expansion of oil to prevent damage to hubs.

Platform Rotator
Platform Rotator – Item 6. Platform rotators will require lubrication only if disassembled for repairs. Consult factory for proper lubricant if replacement of platform rotator is required.

Hydraulic Oil Reservoir
Hydraulic oil reservoir – Item 7. The fluid level should be visible in the bottom of the sight gauge and should be checked with the machine in the stowed position.

The interior of the reservoir should be wiped out and cleaned each time the hydraulic oil is changed. The reservoir filler/breather cap should be removed and the cap strainer cleaned with Kerosene, fuel oil, or other solvent at this time.

Courtesy of Crane.Market

It is absolutely necessary that only new, clean hydraulic oil is added.

Note
If it becomes necessary to add or use an oil other than the recommended fluid, it is important that it be compatible and equivalent to the factory fill. Local oil suppliers can generally furnish this information.

If questions still remain, contact Snorkel Customer Service Department for further information.

Engine
Engine – Item 8. Refer to the engine manufacturer's instruction manual or consult your local engine service representative if engine adjustments or repairs are needed. The engine must be operated in accordance with manufacturer's instructions and serviced at recommended intervals.

Hydraulic Oil Return Filter
Return filter – Item 9. The hydraulic oil return filter is located on the control valve behind the door on the right side of the turntable

The filter element is a throw-away type filter and should be changed after the initial break-in period (approximately 50 hours operation time).

The filter is equipped with a hydraulic pressure gauge to indicate the filter element condition. A by-pass relief within the filter base is provided and is set to by-pass at 25 psi. If pressure readings are above 25 psi, the filter should be changed.

The filter condition should be checked at the 90 day or 150 hour Preventive Inspection Maintenance interval or more frequently under extreme working conditions.

The filter condition indicator is accurate only when the engine is running at maximum rpm and pump is discharging maximum flow, which occurs only during full speed driving. This requires that the indicator be observed while the unit is in motion, booms fully retracted and in stowed position, drive range switch in "LO" position, and drive controller fully forward. Oil temperature should be at least 90° F (32° C).

⚠Warning

Use extreme caution while observing the condition indicator because of the motion of the drive wheels. The condition indicator is best observed from outside of the tract of the vehicle wheels to avoid possible personal injury or machine damage.

When changing the filter element, the oil inside of the filter element, should be examined for deposits of metal cuttings, which is present, could indicate excessive wear in some of the system components.

Suction Strainer
Suction strainer – Item 10. Two 100 mesh strainers are located within the hydraulic oil reservoir, one on the inlet and one on the outlet, and filters the pump suction flow.

The strainers should be cleaned at the time interval shown in the maintenance schedule chart, using Kerosene, fuel oil or other solvent and a soft bristled brush.

Inspect the filter wire cloth for damage. Holes in the filter cloth leak dirt into the pump and other vital hydraulic components. If element is damaged, replace.

When the filter has been thoroughly cleaned, reinstall in suction line and tighten securely.

Door Hinges and Latches
Door hinges and latches – Item 11. After lubricating, remove any excess lubricant or over spray so it will not collect dirt or debris.

Slide Pads
Slide pads – Item 12. Check slide pads for excessive wear and replace as required. Slide pads do not require lubrication.

Battery
Battery – Item 13. The battery will have longer life if the water level is maintained and they are kept charged. The engine will have better starting characteristics with a fully charged battery. In cold weather the battery should be maintained at full charge to keep from freezing. An extremely low or dead battery can freeze in cold weather. Make sure connections are clean and tight.

Make sure charging equipment is operating properly.

⚠Danger

Lead-acid batteries produce flammable and explosive gases. Never allow smoking, flames or sparks around batteries. Lead-acid batteries contain sulfuric acid which will damage eyes or skin on contact. When working around batteries, always wear a face shield to avoid acid in eyes.

If acid contacts eyes, flush immediately with clear water and get medical attention. Wear rubber gloves and protective clothing to keep acid off skin, if acid contacts skin, wash off immediately with clear water.

Battery Care and Maintenance
The following information about battery care and maintenance was supplied by Interstate Batteries and is reprinted here with their permission.

1. New batteries need to be cycled several times before reaching full capacity (20-50 cycles, depending on type). Usage should be limited during this period.

Courtesy of Crane.Market

2. Always recharge batteries fully, immediately after use. Batteries perform best when they are fully charged. More capacity and longer life will result from this practice.

3. The deeper the discharge, the fewer number of cycles a lead-acid battery will deliver. Deep discharges deteriorate the battery quicker than lighter shallow cycles.

4. Battery cables should be intact and connectors kept tight at all times. Systematic inspection is recommended.

5. Vent caps should be kept in place and tight during vehicle operation and battery charging.

6. Batteries should be kept clean – free of dirt and corrosion – at all times. Always keep the top of batteries clean. A film on top of the battery can cause the current to migrate between the posts, accelerating self discharge.

7. Never let the electrolyte level of a lead-acid battery fall below the plates. Lack of maintaining the electrolyte in a lead-acid battery causes damage to the exposed portion of the plate which reduces capacity.

8. Always check electrolyte level before charging. Do not add water to individual cells unless plates are exposed. Batteries should be watered after charging unless the plates are exposed before charging. If exposed before charging, the plates should be covered by approximately 1/8″ of water. Check water level after charging. Water should be kept 1/4″ below the bottom of the fill tube in the cell cover.

9. Water used to replenish batteries should be distilled or treated to not exceed 200 T.D.S. (total dissolved solids... parts per million). Particular care should be taken to avoid metallic solids (iron).

10. A fully charged battery will give you the best and longest service. Be sure the batteries are fully charged before testing or using. A fully charged battery, without a drain or load, after the surface charge has dissipated, is 6.35 volts for a 6 volt battery.

11. Batteries should not be discharged below 20% of capacity (approximately 1.8 volts per cell under normal operating load; 1.98 volts open circuit; 1.145 specific gravity). Proper battery sizing will help avoid excessive discharge.

12. Battery chargers should be sized to fully charge batteries in an eight hour period. Chargers should be kept in proper operating condition.

13. Do not use a mismatched charger of any type; i.e., a 12 volt charger on a 24 volt pack or a 24 volt charger on a 12 volt pack. An undersized charger will never get the job done, no matter how long it tries. An oversized charger will cause excess gassing and heat that could possibly result in a battery meltdown and/or explosion.

14. Never charge a lead-acid battery with a sealed (gel cell) battery charger. The lead-acid battery needs higher voltage to finish its charge. Without it the battery will never come back to 100% and sulfation can occur.

15. Always allow batteries to cool off after charging. The cooling time is very important because heat is generated during the recharge and discharge cycles. Without the cooling time the heat grows, accelerating grid corrosion which is one of the major causes of battery failure. Charging practice should enable batteries to cool before use.

16. Deep cycle batteries need to be equalized periodically. Equalizing is an extended, low current charge performed after the normal charge cycle. It helps keep cells in balance. Actively used batteries should be equalized once per week. Manually timed chargers should have the charge time extended approximately 3 hours. Automatically controlled chargers should be unplugged and reconnected after completing a charge cycle.

17. In situations where multiple batteries are connected in series, parallel or series-parallel, a replacement battery's should be of the same size, age and usage level as the companion batteries. Do not put a new battery in a pack that has 50 or more cycles. Either replace all the batteries with new batteries or install a good used battery's in place of the bad. New batteries should be given a full charge before use.

18. Periodic battery testing is an important preventative maintenance procedure. Hydrometer readings of each cell (fully charged) give an indication of balance and true charge level. Imbalance could mean the need for equalizing and is often a sign of improper charging or a bad cell. Voltage checks (open circuit, charged and discharged) can locate a bad cell or weak battery. Load testing will pick out a bad cell when other methods fail. The point is to look for the abnormal. A weak cell or battery will cause premature failure of companion cells or batteries respectively.

19. As batteries age, their maintenance requirements change, Generally their specific gravity is higher and gassing voltage goes up. This means longer charging time and/or higher finish rate (higher amperage at the end of charge). Usually, older batteries need to be watered more often and their capacity decreases.

Courtesy of Crane.Market

20. “Opportunity charging”, a short partial charge during an extended duty cycle, is a controversial subject. Generally, the practice is a “crutch” to make up for undersized batteries. The correct approach is to install adequate battery capacity. If this is impossible because of lack of space in the battery compartment or extreme operating conditions (24 hour intermittent use, as an example), “opportunity charging” is better than excessive battery discharging. However, the practice can cause batteries to overheat, require more watering and usually will shorten battery life. “Opportunity charging” is a trade off; something to avoid if possible. One charging cycle per day is preferable.

21. Extreme temperatures can substantially affect battery performance and charging. Cold reduces battery capacity and retards charging. Heat increases water usage and can result in overcharging. Very high temperature can cause “thermal run away” which may lead to an explosion or fire. If extreme temperature is an unavoidable part of an application, consult a battery/charger specialist about ways to deal with the problem.

22. An overly discharged battery might need to be cycled a few times before it can recover fully. If a battery begins to heat before coming up to a full charge, it might be necessary to discharge the battery and recharge it a few times. The charge and discharge cycle might help the current acceptance of the battery and facilitate its recovery to a usable condition.

23. Inactivity can be harmful to deep cycle batteries. If they sit for several months, a “boost” charge should be given – more frequently in warm climate (about once a month) than in cold (every 2-3 months).

24. Never store a battery in a discharged state. The sulfate that forms during discharge can make the battery impossible to recharge fully.
